Multifactor authentication now required for LiteBlue

Cyber criminals continue to pose a threat to postal employees by creating fake websites that closely resemble LiteBlue. As a reminder, you can reduce the chances of going to a fake site by navigating directly to the official USPS website at (*spell aloud*) W-W-W - “dot” - L-I-T-E-B-L-U-E - “dot” -U-S-P-S- “dot” -G-O-V.

As an additional layer of protection, the organization is strengthening its security measures by requiring multifactor authentication (MFA) for all employees to gain access to LiteBlue after Jan.15.

Multifactor authentication is an identity verification method in which users provide two or more confirmation factors to gain access to an online account.

It is frequently used by banks and other institutions dealing with sensitive personal information.

When employees log into LiteBlue, they will be required to reset their Self-Service Profile (SSP) password, verify the last four digits of their Social Security Number (SSN), and set up their multifactor authentication preferences.

Once an employee’s setup is enabled, these ID confirmation factors will be required each time he or she logs in.

For more information or to view support materials, go to the LiteBlue login page and select “Multifactor Authentication.”
